

MAP PRODUCTION

- 🌐 We design beautiful, readable and accurate **maps at all scales and for all purposes**. In addition to printed maps we provide **maps for internet applications, GPS and mobile devices**. We are flexible and will assist you in the planning, consultation and development of all cartographic products.

GEOSPATIAL DATA MANAGEMENT

- 🌐 Regio owns and maintains a particular **geospatial database of the Baltic States**, including buildings, address data, points of interest, land cover, road network and navigation datasets.
- 🌐 We can **collect, validate and analyse** geospatial data from different data sources for a very broad spectrum of customers – cartography, web map solutions, mobile applications, logistics, planning, optimisation.
- 🌐 We **offer complete solutions** – spatial data processing and cartographic design go hand in hand.
- 🌐 We have experience in working with the Multinational Geospatial Co-production Program (**MGCP**) specification and **GAIT** quality control tool.

Click here for more information

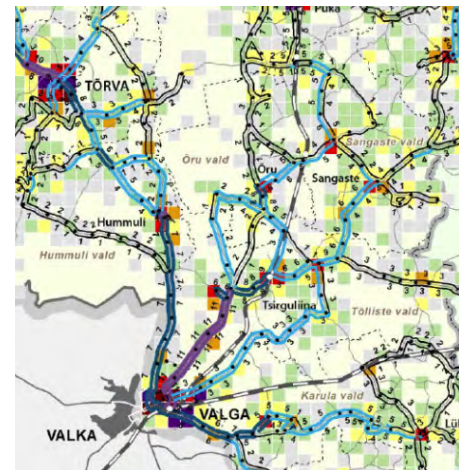

Production of the spatial data using satellite imagery, digitising and compilation of spatial data, e.g. land cover or client specified features.

Validation of different geospatial datasets:

- 🌐 technical validation
- 🌐 systemisation
- 🌐 classification
- 🌐 geo-referencing
- 🌐 data transfer
- 🌐 generalisation
- 🌐 organising

Thematic maps and data visualisation using different geospatial datasets.

DREAM TEAM

Having worked in the cartography field for over 25 years, our team is made up of most dedicated professional cartographers and GIS specialists who's work has been internationally recognised and awarded on numerous occasions.
