

REGIO

Tailored geospatial solutions for every industry

Regio's fields of activity include cartography, spatial data collection, processing and visualization. Our long-term experience and feedback have shown that we can be a versatile, flexible, and reliable partner for the business and private sectors in various geospatial projects.

DATABASE OF THE BALTIC STATES

We own and maintain the most accurate geospatial database of the Baltic States including buildings, address data incl. rural areas, points and areas of interest (POI/ AOI), land cover, road network and navigation datasets. Our datasets can be tailored and are available as extractions or via Regio API.

SPATIAL DATA PRODUCTION

We are experts in the creation, collection, transformation, organization and analysis of spatial data. We digitize and generate vector data based on raster data sources. We also engage in systematic data organization, classification, scanning, transformation, geo-referencing as well as geometry processing.

More info 

REGIO API SERVICES

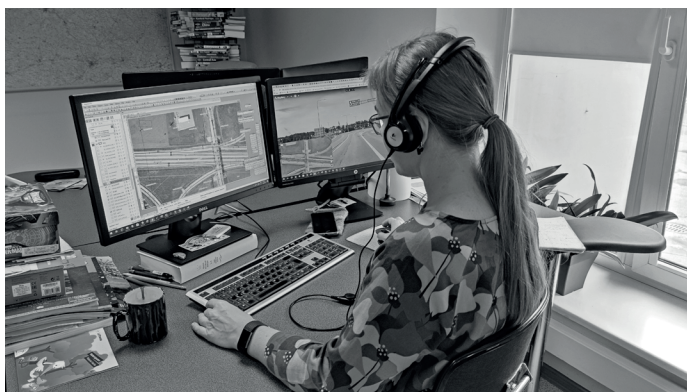

Our user-friendly API services give easy access to our valuable spatial data. There is a choice between various raster and vector maps, address data that also includes farm names and zip codes, route calculation that considers directionality, lanes, turn options, height restrictions, and more.

More info 

MAPPING SERVICES

Our cartography unit creates dozens of maps every year: wall maps, atlases, folded maps as well as maps for internet applications, GPS and mobile devices. We can provide customers with exactly the map they need, whether it is a decorative wall map as a corporate gift or maps for books and magazines.
